

Georgian mild wool fat-tail sheep

This is such mild wool sort of sheep firstly taken out in the World, which has fatty tail. It is formed by crossing Tushuri sheep to Soviet merinos and mild wool Caucasian sheep. This sort is proved in 1958. The average live weight of this original sort rams is 60-70kg. of ewes 42-50kg. The average cutting of rams is 3.5-4kg. of ewes – 2.5-3kg. Wool is white and is characterized by merinos sinuousness, mildness reaches 60-64 quality, length- 7-9cm. Output of pure wool composes 47-53%. Like Georgian half mild wool sheep, this sort is accustomed to difficult nomadic conditions of Georgia too. But it is also characterized by molting, that's why it is not so popular in sheep breeding. The working on the completion of this sort is continuing.
