

Megruli goat

In west Georgia two types of Megruli goat with dairy direction are bred: lowland and mountain goats. The live weight of mountain nanny-goat is 40-45 kg (max.50-60 kg), of billy-goat 50-55 kg (max. 70-90 kg).

Lowland type goat is small but it's characterized by much more dairy. Annually it gives nearly 300-400 kg milk by keeping in the pasture conditions during 6-8 month lactation, but the best of them give 800 kg milk with the 4% fatness. Productivity is nearly 120%. It's characterized by the firm constitution, the hair is short and its rough without baize, white or light grey, its horny.
