

Svanuri pig

Svanuri pig is extended in the high mountainous zone in west Georgia (1800-2000 meters from the sea level). It's formed in the result of the wild pig's domestication. Stern climatic conditions and poor food influenced on its development. By the immunogenetical learning it's clear, that they are alike to their wild ancestors. The same data are given by learning the construction of cranium. Out coming from this, phenotype and genotype prove the origin of this sort directly from its wild ancestors. It is characterized high meat taste peculiarities. Meat is like marble, which is used for bacon. This sort has high endurance towards diseases and is late matured. It is accustomed to Svaneti high mountain conditions. Because of small live weight Svanuri pig was massively crossed to the big white boar for increasing productivity. All this influenced negatively on nomadic peculiarities. The amount of this sort is very small and needs the special attention.

Characteristics	Boar	Sow
Live weight, kg.	50-60	35-40
Body length, cm.	82-90	77-85
High productivity, unit	-	5-6
Milk products, kg.	-	28-30
Average daily increase, g	200-250	200-250
