

## EuroFIR AISBL – supporting food and health professionals

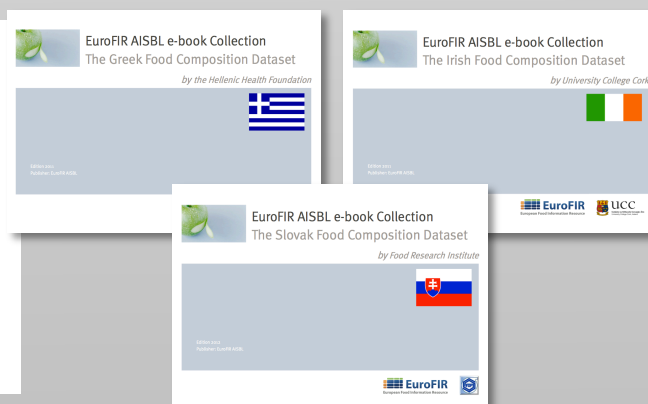

- Food composition data is essential to support the work of dietitians, researchers, and food and health professionals, but until recently the collation and access to this information was discordant.
- EuroFIR Network of Excellence (2005-10) helped harmonise data collection, storage and exchange throughout Europe with the creation of the European Food Data Platform and the launch of an international association, EuroFIR AISBL, which continues to develop these resources.

### EuroFIR AISBL e-Books Collection: Food Composition Datasets

- Full searchable PDF
- Background information
- Dual language content (country-specific and English)
- Comparison with other country's data
- Standardised and best-available content

Coming soon for more countries

### Not a Member yet?

Membership is for individuals and organisations

- Dietitians, researchers, students
- Software developers, industry
- Public sector funding bodies, regulators
- Academia, non-governmental bodies
